Ship apps by *vibes*. Not by syntax.

A six-week online course for IT students and junior developers. Learn to build with AI agents, review what they write, and ship a feature that survives production. Practised in OpenCode.

01 **Target audience**
2nd–4th year IT students and junior developers with 0–2 years of experience who already write code but use AI tools chaotically.

02 **Learners' needs**
Employers expect AI literacy. Juniors need to prompt well, verify generated code, avoid security and licensing traps, and grow their speed safely.

03 **Training goals**
By the end, a learner can write effective prompts, embed AI in the SDLC, review and test AI code, use it securely, and measure the productivity gain.

04 **Course overview**
Six modules: LLM basics, prompt engineering, the agentic workflow, code review, debugging and docs, and a capstone shipped end-to-end.

05 **Duration & schedule**
Six weeks · two live 90-minute sessions per week · 36 hours total · evening groups · recordings and async review between sessions.

06 **Admission requirements**
Basic Python or JavaScript, Git fundamentals, English B1, a laptop and 3–4 hours per week. A short entry task, no exam.

07 **Course format**
Blended: live online workshops, recorded briefs and weekly code review. Groups of 12–16; the capstone is built in pairs.

08 **Skills gained**
Prompt engineering, AI code review, testing generated code, secure AI use, debugging with traces, and a portfolio-ready capstone.

09 **Tuition**
$290 for the full course; early bird $240 until 3 November. Includes materials, weekly code review, capstone review and the certificate.

10 **Endorsement**
A certificate co-signed by the IT faculty partner, with a verification link and a LinkedIn micro-credential listing the skills.

Curriculum

01 **How LLMs actually work**
tokens, context, temperature, failure modes

02 **Prompt engineering for code**
specs, constraints, examples, acceptance criteria

03 **The agentic workflow**
OpenCode sessions, tools, plan vs build, Playwright

04 **Reviewing AI code**
correctness, security, licenses, supply chain

05 **Debugging & docs**
hypotheses, tests as guardrails, ADRs

06 **Capstone: ship it**
one vertical slice, review, demo day

Price

$290

early bird $240 · until 3 nov

[+] 6 weeks · 12 live sessions · 36 hours

[+] weekly code review by mentors

[+] capstone + portfolio review

[+] certificate and LinkedIn badge

The course is built on OpenCode — the open-source terminal agent. Students plan, build, test and review in a real agentic workflow, not a toy sandbox. Every module ends with a lab in the terminal and a human review.

Denis — analyst & coordinator · **Danik** — curriculum developer
Mukhammed — business & value lead · **Arseniy** — designer & QA
