opencode

Ship apps by *vibes.*

A six-week course that turns AI agents into a co-founder — from the first prompt to a reviewed, shipped feature. Practised in OpenCode.

Denis · Danik · Mukhammed · Arseniy

[+] the gap

AI writes the code.
Nobody teaches the review.

01

Speed without safety

Vibe-coded prototypes leak keys, skip edge cases and break in production.

02

No workflow

Tutorials show prompts. Almost none show the loop: spec → generate → review → ship.

03

Juniors left alone

They ship faster than before and own code they cannot explain in a review.

Who it is for

01 **2nd–4th year IT students** who already write code and use AI tools chaotically.

02 **Juniors with 0–2 years** who need to review AI output, not just generate it.

03 **Needs:** prompt skill, safe workflow, speed without broken code, portfolio proof.

Five measurable outcomes

01 Write a spec and a prompt that produces usable code on the first pass.

02 Run an agentic loop in OpenCode: plan, build, test, review.

03 Review AI code for bugs, secrets, licenses and accessibility.

04 Debug with hypotheses and tests instead of regenerating blindly.

05 Ship one vertical slice and defend it in a three-minute demo.

Six modules · 36 hours

01 **How LLMs work** — tokens, context, failure modes.

02 **Prompt engineering** — specs and acceptance criteria.

03 **Agentic workflow** — OpenCode, tools, Playwright.

04 **Reviewing AI code** — security, licenses, data.

05 **Debugging & docs** — traces, tests, ADRs.

06 **Capstone** — one slice, shipped and reviewed.

How the six weeks run

01

2 × 90 min / week

Live online workshops in the evening. Every session is recorded.

02

Blended

Live build-alongs, async briefs, and a weekly code review on your PR.

03

12–16 seats

Small cohort, pairs for the capstone, direct mentor feedback.

What you leave with

01 Prompt engineering for production code, not demos.

02 A repeatable review checklist for AI-generated diffs.

03 Testing and debugging workflows that catch what the model hides.

04 Secure AI use: secrets, licenses, supply chain.

05 A capstone repo, a demo video and a portfolio story.

One price, everything included.

$290

early bird $240 · until 3 november

- [+] 6 weeks · 12 live sessions · 36 hours
- [+] Weekly code review by mentors
- [+] Capstone and portfolio review
- [+] Certificate and LinkedIn badge

Why the certificate means something

01

Reviewed capstone

Checked by a mentor against a public rubric — not just watched.

02

Faculty partner

Co-signed by the IT faculty partner, with a verification link.

03

LinkedIn badge

A micro-credential listing the skills explicitly.

Try it before you enroll.

The live demo runs a real OpenCode-style session in the browser: type a brief, watch the agent plan, write and ship, then review the result. The full course adds 18 lessons, labs and a reviewed capstone.
