A SIX-WEEK COURSE IN SHIPPING WITH AGENTS

Ship apps by *vibes.*

From the first prompt to a reviewed, shipped feature.

STARTS NOV 10 · 12–16 SEATS

open →

vibe-coding

The team

Denis — programme lead

Danik — curriculum

Mukhammed — business & value

Arseniy — design & QA

built with the loop.

WHAT YOU'LL SHIP

Three things you can show.

01

A deployed landing page

brief → build → ship, in one session.

02

A reviewed pull request

diffs, tests and edge cases — not vibes alone.

03

A capstone you can show

a real feature, deployed and presented.

WHO IT'S FOR

Students, juniors, designers and PMs who want to ship with agents — no CS degree required.

19 LESSONS · 36 HOURS · 6 MODULES

THE GAP

AI writes code.

Nobody teaches review.

01 Speed without safety.

02 Prototypes leak keys and skip edge cases.

03 Tutorials show prompts, not the loop.

THE LOOP

01 spec
write the brief

02 build
vibe in opencode

03 review
hunt the bugs

04 ship
own the result

One loop, repeated until it is muscle memory.

CURRICULUM

6 modules. 19 lessons.

01 Foundations
the agent loop · setup · first ship

02 Prompting
briefs · context · constraints

03 Building
UI · state · assets

04 Review & test
diffs · tests · edge cases

05 Security
secrets · auth · input

06 Capstone
ship · present · defend

Every module ends with a lab and a checkpoint.

COHORT 04

Starts Nov 10

6 weeks · 36 hours · 12–16 seats

$290

early bird $240 until 3 November

INCLUDED

19 lessons · labs · checkpoints

reviewed capstone · certificate

a shipped feature you can show
